National Overhaul Warranty (\textit{NOW}®) Program

Cummins NOW Program offers a wide range of standardized engine overhauls and options warranted throughout the U.S. and Canada. The NOW Program is available for 1998-2012 ISX12* and ISX15 engines, as well as N14 CELECT, M11 and ISM engines used in on-highway applications.

Cummins base warranty covers parts, labor, and progressive damage for 1 year/100,000 miles (160,934 kilometers). With the NOW, this extends to 2 years/200,000 miles (321,870 kilometers) for added peace of mind and complete financial protection. The NOW is transferable at no charge and there is no deductible. Suggested fleet net pricing is also available.

The NOW Program also enables you to reduce your cost of ownership through the use of Genuine Cummins ReCon parts. Cummins ReCon parts are factory-remanufactured to meet original performance specifications. Worn parts are replaced with new and obsolete parts are upgraded to newer designs and materials. Only inspected parts that meet Cummins strict salvage guidelines will be reused. This ensures that the performance of your engine is fully restored – and often improved compared to when your Cummins engine was new. Cummins ReCon parts deliver a better return on your time and money.

No matter what business you’re in, you need performance and productivity. The NOW Program is available through NOW-certified Cummins distributors and dealers, ensuring that your overhaul is performed by a Cummins-trained, certified technician.

You may need to schedule an overhaul today or choose to wait until your off-season. When it’s time to overhaul your engine, don’t take the risk of using non-genuine parts. Trust Genuine Cummins new and ReCon parts, built to meet or exceed your engine’s original specifications for performance, reliability, and durability.

Contact your local Cummins distributor for more information about the NOW Program.

*Excludes ISX12 G
